AGED VISITOR HEALTH CHECK
For visitor visa applicants aged 75 and over

Australian law requires that visitors to Australia meet a certain standard of health to be granted a visa. A medical certificate is required for all applicants aged 75 and over applying for a visitor visa for Australia. This medical certificate must be completed by a panel doctor approved by the Department of Immigration and Citizenship and be based on your current state of health. Please note that any expense incurred in obtaining this report is your own responsibility.

For information on contact details of panel doctor in the United Kingdom
